

Additions, deletions and substitutions

Alterations made to the text, whether by the scribe or in some later hand, can be encoded using `<add>` ('addition') and `` ('deletion'); further information may be given as attribute values. The following is an example of a substitution:

```
Kätlig e&rrot;u þau kuædin<expa>n</expa> <del  
type="subst" rend="overstrike">&fins;left</del> <add  
place="margin" hand="scribe">næ&rrot;ft</add> er koma til  
ijngis
```

Which can be made to display as follows:

Kätlig ezu þau kuædin ~~left~~ \næzft/ er koma til ijngis
