Corrections and emendations

The `<sic>` element can be used to indicate that the reading of the manuscript is erroneous or nonsensical, while `<corr>` ('correction') can be used to provide what in the editor's opinion is the correct reading. These can either be used on their own, i.e. giving only the uncorrected or the corrected reading:

```
<sic>giorit</sic>
```

```
<corr>giorir</corr>
```

or, as with `<abbr>` and `<expan>`, one may choose wrap both inside a `<choice>` element:

```
<choice>
  <sic>giorit</sic>
  <corr>giorir</corr>
</choice>
```
